Lisa Thorpe, Program Coordinator  Finance
Matt Warner, Accounting Supervisor  Finance
Andrew Degner, Water Division Manager  Operations
EXECUTIVE SUMMARY

Tualatin Five Year Capital Improvement Plan FY2017-FY2021
The City of Tualatin’s Capital Improvement Plan (CIP) establishes, prioritizes, and plans funding for projects to improve existing and develop new infrastructure and facilities. A CIP promotes better use of the City’s limited financial resources, reduces costs, and assists in the coordination of public and private development.

The City’s CIP is a five-year roadmap, which identifies the major expenses over and above routine annual operating expenses. While the CIP serves as a long range plan, it is reviewed and revised annually. Priorities may be changed due to funding opportunities or circumstances that cause a more rapid deterioration of an asset.

As a basic tool for documenting anticipated capital projects, it includes “unfunded” projects which needs have been identified, but specific solutions and funding have not necessarily been determined.

THE CIP PROCESS
The CIP is the result of an ongoing infrastructure planning process. Planning for the five-year CIP period provides the flexibility to take advantage of opportunities for capital investments. The 2017-2021 CIP is developed through compliance with adopted policies and master plans, the public, professional staff, and elected and appointed City officials. The Draft CIP is made available to the public for review, reviewed by the City’s Advisory Committees, and then adopted by the City Council. The projects listed in the 2016/2017 fiscal year become the basis for preparation of the City’s budget for that year.

CIP REVIEW TEAM
The CIP Review Team is responsible annually for reviewing capital project requests and providing recommendations to the City Manager. This team is comprised of staff from Administration, Finance, Operations, Community Development, Information Services, Community Services, and Police. This team analyzes the financial impact of the CIP as well as the City’s ability to process, design, and ultimately maintain projects. The committee meets periodically throughout the year to evaluate the progress of projects and examine future needs of the City.

The overall goal of the CIP Review Team is to develop CIP recommendations that:
• preserve the past, by investing in the continued upgrade of City assets and infrastructure;
• protect the present with improvements to City facilities and infrastructure; and
• plan for the future.

CATEGORIES
Projects generally fit within the five primary categories identified below:
• Utilities – projects involving the Water, Storm, and Sewer infrastructure.
• Transportation – projects affecting streets, bike lanes, pedestrian crossings, paths, trails, and rail.
• Facilities and Equipment – projects involving buildings, structures, equipment, and vehicles that the City owns and manages.
• Parks and Recreation – projects affecting parks and open spaces, including Parks Facilities.
• Technology — projects involving hardware, software, or infrastructure that improves and/or supports technology.
CIP CRITERIA

Typically, there are more project requests than can be funded in the five-year CIP period, so the CIP Review Team conducts an internal project ranking process. The criteria used in this internal ranking include, but are not limited to:

- **Addresses health and safety concerns** – enhances, improves, or protects overall health and safety of the City’s residents;
- **Supports Council goals** - supports the goals established by the City Council, meets city-wide long-term goals, and meets the Tualatin Community Plan;
- **Meets a regulatory or mandated requirement** – proposed projects satisfy regulatory or mandated requirements;
- **Considers service delivery needs** – the potential for projects to improve service delivery, including coordination with other projects to minimize financial or development impacts to maintain and enhance the efficiency of providing services in Tualatin;
- **Includes outside funding and partnerships** - outside funding has been identified, committed to, or may be obtained through other revenue sources or partnerships;
- **Implements a Master Plan** - maintenance and development of existing or new facilities and infrastructure is identified in one of the City’s Master Plans, enabling the City to continue to deliver essential services to residents;

CAPITAL IMPROVEMENT POLICIES

Time Period

This working CIP document is designed to forecast capital needs for the next five fiscal years. The plan will be produced every year prior to the annual budget process.

Definition of a Capital Expense

The CIP will include those items in excess of $10,000 with an expected useful life of more than one year. Smaller projects (less than $10,000) may be combined into one project and therefore defined as a capital expense. Items such as minor equipment and routine expenses will continue to be accounted for in the City’s annual budget and will not be included in the capital improvement plan.

Operating Budget Impact

The operating impact of proposed capital projects, such as personnel and operating expenses, will be considered in preparing the annual operating budget as the CIP project approaches construction.

Types of Financing

The nature and amount of the project generally determine financing options as do projected revenue resources. The following financing instruments could be used:

- Outside funding, including grants, federal, state, and county funds, and donations
- Development fees
- Utility fund revenues
- General fund revenues
- Debt secured by a restricted revenue source
- General obligation debt
PROJECT LISTS AND DETAILS
Summary lists of projects by category and by funding source are provided for quick reference. Projects with funding identified or funding secured in this five year CIP, total approximately $21 million. Just over $8 million of the funded projects are Utility projects and $7 million in Transportation projects have been identified.

Detailed project sheets are grouped by category and sorted by fiscal year for all funded projects included in the CIP. Project sheets are designed to explain the need for the project, type of project, the criteria met, funding sources, and provide cost information including potential on-going costs.

A list identifying almost $440 million in unfunded projects is contained in the plan to highlight the City’s needs beyond available funding. Cost estimates have been developed for each project based on preliminary project descriptions. Estimates are in today’s dollars; future year projections have been adjusted for inflation using an annual inflation estimate of 3.25% compounded annually for year of construction.

FACILITIES & EQUIPMENT

This section of the CIP includes all buildings and structures the City owns and manages with the exception of structures located in City parks or open spaces, such as accessory buildings and restrooms. Parks related facilities are included in the Parks & Recreation section of the CIP.

Equipment and Fleet needs are also captured in this category.

FUNDING SOURCES:
General Fund
Special Revenue Funds: Water, Sewer, Street
Core Area Parking District Fund
Operations Fund

IN THIS CATEGORY ARE:
Projects necessary to avoid equipment failure or potential property damage and to maintain the current level of services.

DESCRIPTION:
Convert all remaining City Parking Lots, Commons, Tualatin Community Park Basketball, and Skate Park lighting to LEDs. The return on investment is expected to be three years.

PROJECT SCOPE:
Design is completed, materials will be outsourced and installed by City staff.

HISTORY:
This will be the first major fixture upgrades since lighting was installed.

FUNDING SOURCES/PARTNERSHIPS:
Energy Trust Rebate

Yes
No

DESCRIPTION:
Project consists of replacing the Community Services Administration building’s roof. The current roof will be 19 years old by the target replacement date. To install a metal roof on the three buildings in the Tualatin city park, the initial cost is higher than composition, however overall maintenance cost reduction and 50 - 60 year longevity make it a more cost effective choice. By replacing all three roofs at the same time, better pricing is achieved and the colors will match creating a common theme in the park. (Estimated cost of conventional roofing is $19,800.)

PROJECT SCOPE:
Replace roof.

HISTORY:
The current roof will be 19 years old by the target replacement date.

PROJECT TYPE: Maintenance Replacement New/Expansion
 NEW ON-GOING COSTS? Yes No Yes No Yes No

DESCRIPTION:
Project includes cleaning the Green, White, and Blue Lot’s parking surface, making small surface repairs, applying Type II slurry seal, and re-striping. This programmed maintenance will prolong the pavement life and prevent expensive costs of excavation and repaving. It is a recommended maintenance practice to slurry seal the lots every seven to eight years depending on original application and usage. Each of these proposed lots will be seven to eight years since last completed when due.

PROJECT SCOPE:
Clean, repair, slurry seal and re-stripe the Green, White and Blue parking lot surfaces.

HISTORY:
At scheduled slurry seal date, the sealant on each of these proposed lots will be at least seven years old.

FUNDING SOURCES/PARTNERSHIPS:
Core Area Parking District Fund

___ Master Plan: ___ New/Expansion Yes ___ No ___

DESCRIPTION:
The Library is a community gathering space, offering areas for programs, leisure reading, studying, and working with mobile devices. Comfortable seating creates an inviting atmosphere, encouraging repeat use. Work areas (including tables, carrels, and chairs) support both individuals and collaborative groups. To keep the Library inviting and welcoming, Library furnishings should be periodically replaced or repaired because of normal wear and tear, as well as to address changing usage of the Library. In particular, the children and young adult areas need updating to ensure those areas remain innovative and foster exploration and interaction.

PROJECT SCOPE:
Hire consultant to assess current Library furnishings for public use and layout regarding adequacy to meet service priorities identified in Library strategic plan. Based on consultant recommendations, a furniture replacement schedule will be produced identifying priorities for furnishings to be repaired, reupholstered, or replaced beginning in FY 17/18.

HISTORY:
Furnishings were purchased in FY 07/08 when the new library opened.

**DESCRIPTION:**  
Construction of an overhead parking structure with three or four enclosed bays will provide freeze protection for sewer/storm cleaning trucks and dump trucks used for sanding, will extend equipment life, and reduce costs. It will take the pressure off of the demand for space in the Fleet shop during freezing weather. The project is identified in the Operations Master Plan.

**PROJECT SCOPE:**  
Construct parking structure

**HISTORY:**  
This project will establish the first covered storage of heavy equipment.

DESCRIPTION:

Apply approximately 12,000 yards of Type II slurry seal mix to the Warehouse and Public Parking Lot constructed in 2009, filling imperfections and extending the life of the pavement.

PROJECT SCOPE:

A contractor would be selected through public procurement process to complete application.

HISTORY:

The Warehouse and Public parking lots were built in 2009. There was a problem with soft rock in the mix creating small pockets in asphalt, resulting in funds being allocated for the cost of this project from the supplier.

**DESCRIPTION:**
The HVAC system at the police station was installed when the building was completed in 2000. At their replacement date, the HVAC units will be 17 years old and nearing the end of their useful life. This is a planned replacement prior to failure which would require a costly and inconvenient emergency replacement. The condition of the ten individual units will be reviewed and evaluated annually prior to this scheduled replacement to ensure the units are functioning properly and to determine if each will continue to function until the replacement date.

**PROJECT SCOPE:**
Replace ten HVAC units

**HISTORY:**
Units were installed in 2000

DESCRIPTION:
The Sewer Easement machine will be over 20 years old at its target replacement date. The Camel Sewer Jet-Vac truck will be 15 years old at its scheduled replacement date. The truck will be evaluated each year as the proposed replacement date approaches. If it is determined that the truck is still cost effective, the replacement date will be extended. The Mini Excavator will be used to perform new maintenance requirements of water quality facilities and will prevent the need to rent equipment to perform those tasks. The return-on-investment is estimated at 6 years.

PROJECT SCOPE:
Replace Sewer Easement Machine and Vacuum Truck

HISTORY:
Vehicles are scheduled to be replaced after a minimum of ten years of service. The Sewer Easement Machine was purchased in 1995 and the Jet-Vac Truck purchased in 2004.

PARKS & RECREATION

For the purposes of the Capital Improvement Plan (CIP), "Parks and Recreation" covers a broad range of essential parklands, facilities, community services including parks, trails, greenways, natural areas, indoor and outdoor recreational and cultural facilities, and recreation, arts and historic programs.

The CIP includes planning, land acquisition, site design and development, and restoration and renovation projects to maintain and enhance Tualatin’s long-term investment in parks and recreation facilities essential to creating and supporting a high quality of life in Tualatin.

The City’s continuing commitment to the park and recreation system is demonstrated by the investment in, and planning for parks and recreation facilities, while maintain existing infrastructure. The Parks and Recreation Master Plan is projected to be updated in FY 16/17 to provide for the future needs of the community. This comprehensive update will help guide the City in future land acquisition, and development of parks and recreation land and facility projects.

PARKS AND TRAILS

Tualatin’s parklands conserve and enhance natural resources while providing a variety of facilities for the community to enjoy. Parklands provide a place to be outside and experience nature, exercise on greenway and park paths, use kayak and canoe launches to access the Tualatin River, and play in active and passive park facilities. Parks provide places to recreate and socialize such as playgrounds, sports fields, courts, picnic shelters, community centers, and the dog park. In addition to replacing worn existing facilities, new programs and facilities are developed that require improvements and operational resources.

PROGRAMS

Tualatin’s recreation programs and services are conducted at parklands, community centers, schools and community locations. A variety of vital programming in enrichment learning and physical activity are offered for all ages and abilities. Recreation programs and services strengthen the community by improving health, enhancing community development, providing learning opportunities, reducing crime, promoting tourism, and creating community connections and spirit. These programs collaborate with many other agencies, schools, businesses, and nonprofit partners to maximize resources.

PLANNING

Tualatin’s park needs are diverse and change over time. The Parks and Recreation Master Plan is scheduled to be updated in FY 16/17. This will be a system-wide plan that is expected to have extensive public involvement. The completed updated Master Plan will identify future Parks and Recreation land acquisition, development projects and programs.

FUNDING SOURCES:

Projects, development, and programs in the Parks and Recreation have a variety of funding sources including the City’s General Fund, parks system development charges, bond measures, grants, donations, and partnerships.

ISSUES FACING PARKS AND RECREATION:

Securing capital and operating resources to adequately fund maintenance, facility renovation and restoration, land acquisition, development, and programming to provide an equitably distributed and utilized parks and recreation system is the single largest challenge facing parks and recreation.

DESCRIPTION:  
Atfalati Park tennis court is 20 years old. The pavement of the tennis courts, more specifically, the subsurface aggregate of the asphalt, is continually wet and becoming unstable. Therefore the asphalt surface of the tennis courts is cracking and becoming unlevel. This project proposes a complete renovation of the asphalt surface including roto-milling the asphalt in place and reusing it to improve the aggregate base, reinstall asphalt, and re-color coat the courts for tennis and pickleball courts. Other improvements associated with the project would include new nets, posts, hardware, and replacing the fabric fence materials.

PROJECT SCOPE:  
Roto-mill asphalt, reinstall asphalt and re-color coat surfaces.

HISTORY:  
Atfalati Park tennis court is 20 years old.

DESCRIPTION:
Ibach Park Playground is beginning to show its age 20+/- years. The fall protection playground surface is worn and at the end of its life cycle. This surface is an important safety feature at this playground. It needs to be removed and replaced. There are no effective patches or quick fix alternatives.

PROJECT SCOPE:
We may want to hire an architect to update some of the play equipment as needed. A few of the items and features within the playground are outdated. The timing of equipment updates must coincide with the surface replacement.

HISTORY:
This project is a high priority and should be completed in the next two years, even if the Parks Master Plan has not been completed.

DESCRIPTION:
The main goal of this project is to provide safe, accessible and appealing furnishings for older adults with a consistent theme throughout the building. This project is consistent with the City Council 2020 Vision goals. The existing furniture in the Pohl Center is up to 30 years old and the condition and safety is declining. The City’s valued partner Meals on Wheels People supports this improvement as it serves over 8,500 meals in the building and delivers over 10,000 meals in the community. The Pohl Center serves 44,709 people in programs annually and 55,844 people enter the building per year.

PROJECT SCOPE:
To replace the worn, dated and unsafe furnishings at the Pohl Center. A functional furniture concept and plan was developed and approved by the Juanita Pohl Center Advisory Committee.

HISTORY:
The building opened in 1983 and the City completed a feasibility study in 2009 for addition and renovation which included new and upgraded furnishings. Some improvements identified in the plan have been made with grant funding. In 2014 the Juanita Pohl Center Advisory Committee recommended that the Center’s layout and furniture be updated due to age and condition.

FUNDING SOURCES/PARTNERSHIPS:
Meals on Wheels People are a partner in providing services and programs, but not in a position to financially contribute at this time.

DESCRIPTION:
This project is proposed to be grant funded and is to design and renovate the kitchen at the Juanita Pohl Center. The Juanita Pohl Center provides nutritional meals to vulnerable older adults. This project would provide higher food safety standards, improve access and function, and comply with current health and energy efficiency standards. The Meals on Wheels People serve meals at the center and delivers meals to home bound older adults in Tualatin. As the primary user of the kitchen facility, this project would greatly benefit Meals on Wheels People’s mission and they support the project. The Juanita Pohl Center Advisory Committee and Tualatin Parks Advisory Committee support and endorse this project.

PROJECT SCOPE:
The proposed improvements include items such as cooking equipment, food storage equipment and food preparation counters.

HISTORY:
The Center opened in 1982 and since then Meals on Wheels People (formerly Loaves & Fishes) has provided a senior nutrition program under contract with Washington County. Much of the equipment is original and is in need of replacement. Meals are served to 44,709 people annually. Meals on Wheels People supports this improvement as it serves 8,519 meals in the building and delivers 10,376 meals in the community. The City completed a feasibility study in 2009 which included new and upgraded kitchen food preparation, storage and equipment. This plan has guided past improvement projects funded by CDBG.

FUNDING SOURCES/PARTNERSHIPS:
The City is seeking CDBG funds from the Washington County Office of Community Development to complete this project. Meals on Wheels People is a partner in providing services and programs, but not in a position to financially contribute at this time.

DESCRIPTION:
The Pohl Center’s flat design roof will be completely torn off and replaced with a new thermal plastic overlay. Current building codes do not allow another roof layer to be added without removal of the existing materials. As the target replacement date approaches each year, the roof will be evaluated and timing adjusted as necessary. The current roof will be 19 years old by target replacement date. Extending the replacement date increases the probability of future property damage and adds to future replacement costs.

PROJECT SCOPE:
Complete tear off of old roof materials. Replace with a new thermal plastic overlay.

HISTORY:
The current roof will be 19 years old by target replacement date.

NEW ON-GOING COSTS?
- Yes
- No

DESCRIPTION:
Improve and renovate the existing wood chip path that serves the “Venetia/Sequioa Ridge” neighborhoods along the Saum Creek Trail. The existing path is substandard and is not accessible per ADA requirements and needs improvements and upgrades to meet increasing use.

PROJECT SCOPE:
Adopt a design/build approach to maximize efficient use of funds. Poor grading and drainage conditions exist at this trail that was build below current minimum standards.

HISTORY:
An anticipated increase in users as a direct result of the addition of Sagert Farms neighborhoods and the connection to this trail. A storm water quality facility is adjacent to this trail that has some impact on accessibility. Current topography conflicts and difficult slopes make this site prone to erosion and washout problems.

FUNDING SOURCES/PARTNERSHIPS:
The adjacent storm water quality facility is in need of improvement. A “partnered” funding approach to address the overflows and washouts of the trail by providing survey and engineering work could be an alternative matching fund.

- Replacement: Yes
- New/Expansion: Yes

NEw ON-GOING COSTS?
- Yes
- No

DESCRIPTION:
The Tualatin High School synthetic field was constructed and opened for use in 2005 with a projected life expectancy of 10 years. It needs to be replaced. The field is shared between school athletics/physical education and community organizations. This project is consistent with the City Council 2020 Vision goals and the Parks and Recreation Master Plan.

PROJECT SCOPE:
The high school field replacement needs to be planned and scheduled. At this time the synthetic field is estimated to have two years of remaining useful life. Tentative schedule for renovation: next to last year of use Fall 2015 - Spring 2016; last year of use Summer 2016 - Spring 2017; design, bid and construct replacement Summer 2017; and ready for use starting Fall 2017.

HISTORY:
Construction of this high school field was a cooperative project between the City and School District and operates under a joint use agreement. This agreement calls for the School District to maintain the field and for the School District and the City to split the cost of replacement. Hundreds of community nonprofit youth sports teams use the field each year serving thousands of Tualatin children and teens. Each year, tests are performed annually to assure the compression of the field meets safety standards. The rubber compresses and compacts due to use and wear. According to recent tests the field is beginning to fail. It shows wear of approximately one inch. As the field wears the rubber compression is no longer as thick as needed for safety reasons.

FUNDING SOURCES/PARTNERSHIPS:
Tigard Tualatin School District is expected to contribute 50% of this replacement project. Other partners include Tualatin Youth Soccer, Tualatin Youth Football, Tualatin Youth Baseball and youth lacrosse.

FUNDING SOURCES FOR THIS PROJECT:

This cost replaces the Vinyl (VCT) in the large Recreation area of the building, including some floor repairs.

Project Scope:
Have contractor remove existing, repair damages to sub floor and install new VCT.

History:
There are some flooring issues and estimate is based on current assessment with continued exploration before budget timeline.

DESCRIPTION:
Project consists of replacing the Van Raden Center’s roof with composite shingles. The roof will be 20 years old by target replacement date. It is recommended to install a metal roof on the 3 buildings in the Tualatin City Park, the initial cost is higher than composite shingles, however maintenance cost reduction and 50 - 60 year estimated useful life make it a more cost effective choice. If all 3 roofs are replaced at the same time, there will be better pricing and the colors will match creating a common theme in the park. The estimated metal roofing price includes new gutters and downspouts while the $37,000 estimated cost of conventional roofing doesn’t include gutter and downspouts.

PROJECT SCOPE:
Replace composite shingles with a metal roof and replace gutter and downspouts

HISTORY:
The roof will be 20 years old by target replacement date.

DESCRIPTION:
Project consists of replacing all existing windows in the Van Raden Center with new double pane more energy efficient, tempered glass windows. The windows will continue to be inefficient energy-wise and additional maintenance and painting repair costs will occur if not replaced.

PROJECT SCOPE:
Replace windows

HISTORY:
While several windows were replaced in the mid '80's many of the windows are from the original construction (1947) or from the addition in 1951. The single pane windows will be replaced with energy efficient windows.

TECHNOLOGY

Technology projects and expenses are designed to improve production of information, connections with customers, staff productivity, and automated processes.

As computer technology becomes more involved than just a typical personal computer and network and begins to integrate with other uses such as phones, hand held devices, and even automobiles, a larger portion of city resources will need to be dedicated to support these functions.

The Technology Category captures those expenses relating to city-wide hardware needs such as computers, servers, switches, fiber and regional connections. It also includes major software needs such as city-wide financial software, anti-virus, and desktop software. Support for web services, web development, and Geographical Information Services is also included.

Minor equipment, scheduled replacement of computers or equipment, and other routine expenses are not included in the capital improvement plan.

FUNDING SOURCES:
Building Fund
General Fund
Utility Funds

ISSUES FACING TECHNOLOGY:
Forecasting what technology will be needed when trends and improvements are changing so rapidly.

DESCRIPTION:
This annual recurring cost is for various server components needed to maintain the operational efficiency of our systems.

PROJECT SCOPE:
These funds are to be used for hardware upgrades and replacement to existing infrastructure, e.g. CPUs, switches, tape systems, etc.

HISTORY:
Historically we have had annual replacements to our server and network infrastructure. These are annual costs to maintain an effective, robust and functional server and network system.

FUNDING SOURCES/PARTNERSHIPS:
General Fund: Information Services

FUNDING SOURCES FOR THIS PROJECT:
General Fund: Information Services FY16/17 $20,000

DESCRIPTION:
This expense is for the periodic replacement of our Microsoft Office suite of products, e.g. Word, Excel, PowerPoint, Access and Outlook. Each person at the City that has a PC, laptop or mobile computer will require a license. Some will require two [2] licenses if they have multiple devices.

PROJECT SCOPE:
These funds are to be used for software replacement to existing product, e.g. Office 2007. We will have to decide if we want to use the subscription model or if we will purchase full licenses. Additionally, we could go the route of using Google Docs. Many choices to make.

HISTORY:
We last purchased our MS Office suite in circa 2008. It’s time to purchase it again.

DESCRIPTION:
Existing network switches are approaching eight years old. A plan to replace existing devices needs to begin. Historically, the City has been able to leverage a grant from MACC for funding to purchase these devices. Due to contract changes, access to those funds may be diminished or not available. These network switches manage the flow of data between the servers and individual PCs.

PROJECT SCOPE:
These funds are to used to purchase network switches. These are highly complex and expensive devices. These devices ensure that data traffic flows properly between our servers and individual PCs and that it happens quickly.

HISTORY:
Existing switches were purchased eight to ten years ago. Backups to these critical devices were purchased through a grant from MACC.

DESCRIPTION:
The existing phone switch is about seven years old. We are several generations behind current technology. Feature sets and support are prompting us to upgrade or replace our phone and voicemail system. These funds are intended to support the upgrade of phone switch, voicemail system and possibly phone sets.

PROJECT SCOPE:
These funds are intended for the upgrade or replacement of our Mitel phone and voicemail system and possibly the desktop phone sets.

HISTORY:
Existing switches were purchased several years ago and have worked fine, but many new features are available and several generations of systems have been produced.

DESCRIPTION:
This technology is needed due to the physical layout of City offices and the lack of storage capacity for paper documents. Scanning and indexing records will make documents readily available to both citizens and staff while being stored securely in a system that meets all requirements for trustworthy electronic records. This project will focus on record series with a permanent retention requirements (ie. Resolutions, Ordinances, Agreements). This project is identified as a goal in the Records Management Strategic Plan. Estimated annual maintenance of a system like this is $8,000.

PROJECT SCOPE:
A consultant will be hired to evaluate electronic record management needs. Electronic records management systems will be evaluated and a suitable software solution purchased.

HISTORY:
Permanent records are utilized by many departments within the City and regularly requested for review by citizens. The physical layout of City offices and the lack of storage capacity for paper documents makes retrieval difficult and time-consuming.

FUNDING SOURCES/PARTNERSHIPS: While funding is identified as the General Fund: Administration, many departments will benefit from this expense.

![Image of file cabinets]
DESCRIPTION:
The Library utilizes RFID technology for improved security and inventory control and to enable patron self-service. To enhance customer self-service and efficiency options, the Library will install an Intelligent Return induction system. This would enable patrons to automatically check in materials they are returning, providing quicker service and improving patron satisfaction.

PROJECT SCOPE:
Phase One (replacing the Library’s three self-check machines) is scheduled for FY 15/16. Phase Two will purchase and install an Intelligent Return: an in-wall induction unit. A future phase could expand our automated material handling capabilities by adding a multi-bin sorter system, routing items to different bins according to their status or shelving location.

HISTORY:
A feasibility study for automated material handling (AMH) at the Library was completed in 2011 by SRG Partnership. It was determined to not be feasible within the available workroom space; however new equipment and technology have made AMH systems more modular. Existing RFID equipment was installed in 2012. Five WCCLS libraries now have AMH.

TOTAL: $51,000

DESCRIPTION

The Library provides internet, productivity software (Microsoft Office, etc.), and printer access for public use on 28 computers (in separate areas for child, teen, and adult use) and 12 laptops. According to a recent WCCLS survey, this technology is used for education, social inclusion, employment, and civic engagement. In order to keep up with advances in technology, and the changing needs of a connected citizenry, the Library’s public technology needs to be regularly replaced. Additionally, new software should be considered to support digital literacy training and the creation of digital content.

PROJECT SCOPE

The Library and Information Services will collaborate on a Technology Plan as part of the Library’s strategic planning process in FY 15/16. Equipment purchased will be informed by that plan, including how many and what type of devices to offer and where they should be deployed within the Library.

HISTORY

Current PCs were purchased in 2012, and laptops were purchased in 2013, with 3 year warranties. Information Services and WCCLS Long Range Service Plan recommend equipment upgrades or replacement on a 3-5 year cycle.

FUNDING SOURCES/PARTNERSHIPS:

General Fund: Library

FUNDING SOURCES FOR THIS PROJECT:

General Fund: Library FY16/17 $30,000
General Fund: Library FY17/18 $21,000

TOTAL: $51,000
TRANSPORTATION

The City of Tualatin’s street system consists of 91 miles of streets (seventy-seven miles are City maintained, nine miles are maintained by Washington and Clackamas counties and five miles by the state) and 48 traffic signals (22 are city-owned, 18 are county-owned, and 8 are state-owned).

STREETS
To protect the long-term capital investment in the City’s roadways it is necessary to regularly maintain the streets. Methods of maintenance include crack sealing, pavement patching, and/or structural overlays. In cases of severe deterioration, total reconstruction of the roadway is necessary. In order to avoid higher costs of replacing streets, Operations staff tracks the condition of streets throughout the City with a computer program that identifies years in which critical maintenance should occur. Priorities for overlays and reconstruction are determined by the type of street, traffic volume, condition of street, and years remaining at the existing condition.

INTERSECTIONS
These projects increase the carrying capacity and improve safety by moving traffic more efficiently and safely through existing intersections. Safe pedestrian travel is also enhanced with these projects. Project features may include placement of traffic signals, re-channeling traffic, and/or creating protected left turn lanes.

PATHWAYS/BIKEWAYS
Pedestrian and bicycle use is enhanced and encouraged through the development of pathway/bikeway projects. These projects help alleviate traffic congestion, air pollution, and contribute to a sense of community by providing an alternative mode of transportation.

FUNDING SOURCES
The Road Operating/Gas Tax Fund receives its revenue from a share of the Washington County gasoline tax and a share of the State gasoline tax. The Washington County gasoline tax is a $0.01/gallon tax on gas sold in the County; apportioned on a per capita basis. The State Highway Trust Fund consists of a gas tax, vehicle registration fees, and weighted mile taxes for heavy vehicles. It is projected to be apportioned to the City at a rate of $57.81 per capita for FY 2016-2017.

Per ORS, 1% of State Gas Tax funds are set aside for footpath/bike trail projects; if these funds are not used annually, they may be held for up to ten years in a reserve fund.

The Road Utility Fund is designed to fund maintenance of City streets, including repairing sidewalks, landscape enhancements along the rights-of-way, street tree replacement, and for operational costs of street lights. Revenue for this fund is generated through a monthly utility fee paid by residents and businesses.

The Transportation Development Tax Fund is supported by one-time fees levied against new development within Washington County. The fund pays for capital costs associated with roads and transit to serve new development.

ISSUES FACING TRANSPORTATION
The Transportation System Plan, updated in 2014, identified many projects which have been prioritized and included in this CIP based on available funding. Those projects which do not have available funding are included in the Appendix under Unfunded Projects.

NEW ON-GOING COSTS?

DESCRIPTION:
To install video cameras at three city owned signalized intersections: Martinazzi & Boones Ferry Rd, Martinazzi & Warm Springs or Fred Meyer (depending on fiber availability), and Boones Ferry & Tualatin Rd.

PROJECT SCOPE:
Purchase camera equipment and pay county to install as part of the signal maintenance contract. County will connect their fiber line into communications at city offices next to library. A dedicated workstation will be set up with county provided software on the county network to view all live video feed of signalized intersections in Tualatin.

HISTORY:
In a recent quarterly meeting with the Washington County Signal group, staff discussed the cameras that were used to view possible flooding potential in certain areas in Tualatin. From there we discussed installation of cameras at other city owned intersections now that we have fiber access nearby with both our project and their Phase II fiber project. Washington County also discussed access to their live feed on the signal cameras in Tualatin for possible traffic evaluation. The county says the city access to their live info has been discussed before with multiple departments, but wifi access to the info would slow their network connections. Due to new fiber lines, this access would be much easier and cost effective for determining traffic issue causes and solutions. The police department was interested in this feed especially at red light camera and other safety intersections, as well as Operations being interested to monitor flooding conditions.

FUNDING SOURCES/PARTNERSHIPS:
Transportation Funding - $30,000 would be for the installation of camera equipment and county accessed workstation, $20,000 for fiber needed to intersection on Martinazzi at either Fred Meyer or Warm Springs.

FUNDING SOURCES FOR THIS PROJECT:
Road Op/Gas Tax Fund  FY16/17  $50,000

TOTAL:  $50,000
**DESCRIPTION:**
New bridge on Myslony Street over Hedges Creek between 112th Avenue and 115th Ave. Myslony is a Major Collector. This project will provide a critical transportation connection and provide options for industrial traffic other than Tualatin-Sherwood Road. This project will include two or three travel lanes, bike lanes, planter strips, sidewalks, storm drainage, water quality treatment, and street lighting. The bridge is proposed as a pre-cast structure supported on steel pipe piles. Bridge span will be approximately 100 feet. This project will coordinate with the construction of a water line as identified in the 2013 Water Master Plan. This project will be constructed in conjunction with the Myslony Water Loop System listed in the Utilities - Water section.

**PROJECT SCOPE:**
Construct bridge and associated right of way improvements according to construction documents prepared in FY 2015. Purchase right of way needed to construct bridge approaches.

**HISTORY:**
This project is identified as a new City street extension project in the 2014 Transportation System Plan with medium term (5-10 years) priority. New development through Franklin Business Park has improved 115th Avenue and Myslony Street.

**FUNDING SOURCES/PARTNERSHIPS:**
The remaining balance of the Traffic Impact Fee Fund will be added to the Transportation Development Tax funds along with private donations to complete this project. Note that we expect to spend $300K in FY2015/16 and spend the remainder in FY2016/17.

IMPLEMENT SMALL TRANSPORTATION IMPROVEMENT PROJECTS IDENTIFIED BY THE COMMUNITY OR INCLUDED IN THE TRANSPORTATION SYSTEM PLAN THAT WILL IMPROVE SAFETY AND MOBILITY WITHIN THE RIGHT OF WAY. PROJECTS COULD INCLUDE SIDEWALK IMPROVEMENTS, CROSSWALKS, SIGNING, ROADWAY STRIPING, TRAFFIC CALMING, OR OTHER SOLUTIONS TO GROWING TRAFFIC SAFETY CONCERNS.

PROJECT SCOPE:
Prioritize, design and construct small transportation improvement projects identified by the community to improve safety and mobility.

HISTORY:
Funding for Pedestrian Safety/Neighborhood Traffic Solution projects were first included in the City's budget in 2012. These funds are routinely spent making needed improvements throughout the City.

DESCRIPTION:
At three city owned signalized intersections in town, we are experiencing loop signal detection failure: Martinazzi Ave & Warm Springs, Martinazzi & Fred Meyer, and Martinazzi & Boones Ferry Rd. The loop signal detection failures cause unnecessary traffic issues in town with traffic backup at the signalized intersection because extra green time is given to the movements at a signalized intersection that are not having the highest traffic volumes which cause traffic backup at the intersection that can cause additional traffic at nearby intersections also.

PROJECT SCOPE:
This project would have the county crews install radar detection at each of the intersections on the movements where the loops are failing. Installation will occur with no roadway work, which makes installation quick and without unnecessary traffic problems.

HISTORY:
This issue was raised in meetings with the county signal team after repeated complaints from citizens and repeated county maintenance of these issues (we pay the county for maintenance of city owned signals). The county has had to manipulate timing in the signal cabinets to compensate for the failing loops which gives inadequate green time if there was substantial traffic on occasion on the movements where the loops are failing.

FUNDING SOURCES/PARTNERSHIPS:
Since it is an existing system, it is more of a maintenance type project, but the project is managed by the Engineering Division. The equipment would be new and different type of equipment that is currently present. The equipment could also allow for additional uses besides just detection.

**DESCRIPTION:**
Construct minor improvements at new and existing Rideshare and Trimet transit stops to improve access and safety.

**PROJECT SCOPE:**
Design and construct minor improvements at RideShare stops including 5’ x 8’ concrete pads for ADA landings. Extend the existing wide sidewalk north from the current WES stop on Tualatin Road at Nyberg to allow two buses to unload at the same time to accommodate new Route 97. Extend the sidewalk approximately 40-ft south of current location.

**HISTORY:**
Project resulted from two new fixed routes proposed by Ride Share in Tualatin and a new Trimet route. The Ride Share routes use existing City sidewalks for transit stops. The sidewalks are typically 5 or 6 feet wide. ADA requirement for transit stops is 8-feet from the curb, which requires widening the sidewalks at the stops to provide room for ADA loading and maneuvering. Trimet will be running multiple routes to the WES stop at Tualatin Road and Nyberg Street, creating a need to stop two buses at one time.

UTILITIES - STORMWATER

The 1987 revisions to the Federal Clean Water Act placed stringent water quality standards on the discharge of storm water runoff into streams, lakes, and rivers. The Surface Water Management (SWM) program was developed to address these water quality regulations and ongoing flooding problems throughout Tualatin.

Tualatin’s storm drain system consists of approximately 89 miles of pipes, 12 drainage basins, over 2,800 catch basins, 77 public water quality facilities (WQFs), and hundreds of manholes.

FUNDING SOURCES
Fees collected in the Storm Drain Operating Enterprise Fund, through Clean Water Services’ Surface Water Management Program provide funding for, and are restricted to, maintenance and capital construction of the Stormwater distribution and collection system.

Developers are required to pay a Storm Drain System Development Charges to cover the costs associated with extending service to new and expanding developments. These funds can be used to construct capital improvements thus increasing the capacity of the system.

ISSUES FACING UTILITIES
Aging parts of infrastructure—While Tualatin’s distribution system is relatively young, regular replacement and upgrades are needed to prevent disruption of services.

Regulatory requirements— As new or more stringent regulatory requirements are put into place, changes to the distribution and collection systems are necessary to stay in compliance.

Expansion to serve new development— New development requires new infrastructure be constructed to meet the increasing demands.

DESCRIPTION:
Install a water quality manhole near Hedges Green Retail Center to retrofit an untreated storm drain line to prevent debris from washing into the wetlands.

PROJECT SCOPE
Obtain an easement from the property owner, design, and install a water quality manhole near Hedges Green Retail Center.

HISTORY:
The project is part of the retrofit program required by Clean Water Services (CWS) to prevent garbage and other debris from washing into the wetland from the city storm drain system. The project was scheduled for the 2014-2015 fiscal year but postponed in order to allow for time to obtain the easement from the property owner.

DESCRIPTION:
The stormwater outfall currently has no water quality treatment and serves 143 acres of impervious surface. Clean Water Services’ Stormwater Discharge Permit (MS4) through DEQ required that all conveyance systems within their jurisdiction be retrofitted to provide water quality.

PROJECT SCOPE:
Design and install some sort of water quality for the untreated outfall. Work with property owners to obtain easement to build water quality facility or water quality manhole.

HISTORY:
Part of the storm drain outfall retrofit required by Clean Water Services.

DESCRIPTION:
This outfall currently has no water quality treatment and serves 113 acres of impervious surface. As a part of the MS4 permit, outfalls are required to be retrofitted to provide water quality. There is currently a Public Water Quality Facility near an untreated outfall. The plan is to redesign the water quality facility to treat the other untreated water too.

PROJECT SCOPE:
Hire a designer to redesign facility and design pipes to enter existing facility to obtain treatment for untreated area. Repairs to the existing facility will be made and additional piping will be installed.

HISTORY:
This stormwater outfall serves 113 acres of impervious surfaces yet has no water quality treatment.

DESCRIPTION:
Develop a comprehensive Stormwater Master Plan (SWMP) based on current and future forecasted development conditions. Identify drainage basins throughout the City and UGB; estimate runoff volumes for the basins based on CWS, DEQ, and City standards; evaluate the collection and conveyance system; evaluate existing water quality facility capacity; identify water quality and system upgrade needs necessary to accommodate the City’s stormwater needs and meet CWS and other environmental requirements through the 20-year planning period. The plan will provide recommendations for improvements based on long-range development of the City’s UGB including near-term and long-term projects that may be incorporated into the City’s Capital Improvement Program to provide adequate stormwater conveyance capacity and stormwater treatment for improved surface water quality.

PROJECT SCOPE:
Establish a foundation for evaluating stormwater needs in Tualatin. Identify existing problem areas and provide solutions including collection, conveyance, treatment and detention facilities. Provide recommendations for expansion and extension of the stormwater system to serve future growth. Provide a review of the current funding, including rates and system development charges, for the stormwater program. Establish baseline cost estimates (AACE Class 5) for recommended stormwater improvements that will be used for planning in the Capital Improvement Program and for budgeting in the annual budget.

HISTORY:
Original drainage master plan was developed in 1972 and supplemented with the Bridgeport Area Stormwater Master Plan in 2005. The City does not currently have a master plan that addresses the whole city.

UTILITIES - WATER

Tualatin’s water comes from the Bull Run Watershed and the Columbia Southshore wellfield systems which is an unfiltered system. The City purchases the water from the City of Portland and distributes it to Tualatin residents.

The City’s distribution system contains 111 miles of water lines ranging from 4 to 36 inches in diameter, 5 reservoirs, and 3 pump stations and over 6,600 water connections.

FUNDING SOURCES

Fees collected in the Water Operating Enterprise Fund, provide funding for, and are restricted to, maintenance and capital construction of the water distribution and collection system.

Developers are required to pay a Water System Development Charges to cover the costs associated with extending service to new and expanding developments. These funds can be used to construct capital improvements thus increasing the capacity of the system.

ISSUES FACING UTILITIES

Aging parts of infrastructure—While Tualatin’s distribution system is relatively young, regular replacement and upgrades are needed to prevent disruption of services.

Regulatory requirements—As new or more stringent regulatory requirements are put into place, changes to the distribution and collection systems are necessary to stay in compliance.

Expansion to serve new development—New development requires new infrastructure be constructed to meet the increasing demands.

NEW ON-GOING COSTS?

DESCRIPTION:
Construct a 12-inch water pipe between the existing 16” pipe in Tualatin-Sherwood Road and the new Willamette Water Supply Program (WWSP) 66” diameter pipeline. Connection will be used to provide the WWSP pipe with water during and after construction. Connection will remain in place to provide a possible connection to the WWSP pipeline during an emergency.

PROJECT SCOPE:
Construct a 12” water pipe; hot tap existing 16” water main; install new vault to accommodate valves, a meter, and other misc. piping.

HISTORY:
Project is being constructed by the WWSP and Washington County. The City of Tualatin will reimburse the WWSP for a proportionate share of the construction cost.

FUNDING SOURCES/PARTNERSHIPS:
Water Operating Fund

FUNDING SOURCES FOR THIS PROJECT:
Water Operating Fund  FY16/17  $22,000

NEw ON-GOING COSTS?

New Annual On-Going Costs: ________________

DESCRIPTION:
Construction of a new 3,600 pgm pump station near the A-2 Water Reservoir and approximately 3,900 linear feet of 16-inch diameter piping to connect the new B Level Pump Station to the existing system to provide primary and back-up supply to Service Area B (Project PS-1 in the 2013 Water Master Plan). The alignment was modified in the recent 124th WL study (purple line on map below).

PROJECT SCOPE:
Construct a new pump station and piping.

NEW ON-GOING COSTS?
No

DESCRIPTION:
Construction of approximately 1,300 linear feet of 12-inch diameter piping to connect the existing dead-end line in 115th to the line in Blake street to the east (purple line below). This project will alleviate an existing water pressure issue in this dead end line.

PROJECT SCOPE:
Construct approximately 1,300 linear feet of 12-inch diameter pipe

HISTORY
Water pressure in this line has historically been an issue, the new line will prevent the issues from occurring in the future.

DESCRIPTION:
Construction of approximately 1,100 of 12-inch waterline in SW Myslony to complete a loop in the system and to improve fire flow capacity. This project will be constructed in conjunction with the Myslony Bridge project listed under the Transportation section.

PROJECT SCOPE:
Construct approximately 1,100 of 12-inch waterline

HISTORY:
The fire flow level historically has not been adequate. Completing a loop system will improve fire flow. Water Master Plan, 2013 (P-3)

DESCRIPTION:
Lower existing 16" water main under southbound on-ramp to accommodate ODOT I-5 interchange project that will lower existing on-ramp.

PROJECT SCOPE:
Prepare design engineering plans in coordination with ODOT to accommodate ramp adjustments. Use ODOT plans as base map to develop design and construction drawings for utility adjustment.

HISTORY:
ODOT Region 1 contacted the City to request coordination with project. The project is required to meet conditions of utility easement.

FUNDING SOURCES/PARTNERSHIPS:
The project will be done in conjunction with ODOT’s ramp adjustments and will be paid out of the Water Operating Fund.

DESCRIPTION:
Replace aging water mains to ensure sustainability of the system for ongoing operations. Continue water main replacement program to systematically replace aging mains with a focus on existing asbestos cement and old cast iron pipe and associated service lines to reduce water loss and excessive main breaks.

PROJECT SCOPE:
Identify mains that require replacement; prepare engineering plans and specifications need to bid the work if necessary; and construct the improvements.

HISTORY:
The City has been performing a water main replacement program since the 2000’s to replace aging AC and cast iron pipe throughout the system. This project continues that program which is identified in the 2013 Water Master Plan (P-1).

FUNDING SOURCES/PARTNERSHIPS:
Individual projects may be eligible for up to 36% funding from the Water SDC Fund.

- Replacement: Yes No
- New/Expansion: Yes No

DESCRIPTION:
This project consists of interior and exterior coating of the City’s Avery A1 Reservoir, a ground level 2.2 million gallon welded steel drinking water storage tank. The tank is 90 feet in diameter and 50 feet tall and was constructed in 1971. The exterior coating of the A1 Reservoir has approached the recommended limit for adding more coatings and has a lead based primer coating. The interior coating appears to be the original coating applied when the reservoir was installed. Surface preparation will include full removal of existing interior and exterior coatings with abrasive blast methods. The existing exterior coating system has lead based paints and as such will require full containment and lead abatement procedures.

PROJECT SCOPE:
Surface preparation will include full removal of existing interior and exterior coatings with abrasive blast methods.

HISTORY:
The Reservoir was constructed in 1971. The exterior coating has reached its limit for additional coatings and has a lead based primer coating. The interior appears to be the original coating.

NEW ON-GOING COSTS?

DESCRIPTION:
This project consists of exterior coating of the City’s Norwood B2 Reservoir, a ground level 2.8 million gallon welded steel tank constructed in 1989. The original exterior coating of the B2 Reservoir was removed in 2000 due to poor adhesion. After cleaning, a standard exterior coating will be applied.

PROJECT SCOPE:
Clean exterior and apply new coating.

HISTORY:
The original exterior coating of the B2 Reservoir was removed in 2000 due to poor adhesion.

UTILITIES - WASTEWATER (SEWER)

The City owns and operates a wastewater collection system consisting of 96 miles of sanitary sewer pipes (88 miles are maintained by the City and 8 miles are maintained by Clean Water Services), over 6,400 sanitary sewer connections, hundreds of manholes, and 10 lift stations maintained by CWS.

Wastewater generated in Tualatin is treated at Clean Water Services’ Durham Creek Wastewater Treatment Plant.

FUNDING SOURCES
Fees collected in the Sewer Operating Enterprise Fund provide funding for, and are restricted to, maintenance and capital construction of the sewer distribution and collection systems.

Developers are required to pay a Sewer System Development Charge established by Clean Water Services to cover the costs associated with extending service to new and expanding developments. These funds can be used to construct capital improvements thus increasing the capacity of the system.

ISSUES FACING UTILITIES
Aging parts of infrastructure—While Tualatin’s distribution system is relatively young, regular replacement and upgrades are needed to prevent disruption of services.

Regulatory requirements—As new or more stringent regulatory requirements are put into place, changes to the distribution and collection systems are necessary to stay in compliance.

Expansion to serve new development—New development requires new infrastructure be constructed to meet the increasing demands.

DESCRIPTION:
Repair of the 18” Trunk Line that travels through the Nyberg Wetlands. This Trunk Line services the City from I-5 East. The new upcoming developments of Sagert Farms and RV Park of Portland site will also be serviced by this line.

PROJECT SCOPE:
This first phase of this project will identify repair needs and costs associated with those needed repairs.

HISTORY:
In 2011 the City experienced an SSO( Sanitary Sewer Overflow) in the Nyberg wetlands due to the blockage of this 18” Trunk line. Investigation revealed that a structural defect allowed a tree root to penetrate the line and collect FOG (fats-oil-and grease) resulting in the blockage. Since that time this line has been on a six month Hot Spot Maintenance schedule.

DESCRIPTION:
Update 2002 Sanitary Sewer Master Plan (SSMP) based on current and future forecasted development conditions.

PROJECT SCOPE:
Further develop the planning done by Clean Water Services (District) for the Tualatin area. Refine the Evaluation, focus on Tualatin, and address the City’s specific planning projections. Evaluate and recommend current and future infrastructure needs to allow the sewer system to keep up with growth, and provide planning level costs. Develop a plan that will address regulatory requirements and provide cost-effective sewer service that meets the demands of residential, commercial, and industrial customers.

HISTORY: The 2002 report updated the City of Tualatin sanitary sewer master plan, which was previously updated in 1984. Project was temporarily placed on hold pending results of Basalt Creek Planning study. Work remaining includes incorporation of Basalt Creek annexation area, assessment of downstream impacts from Basalt Creek, and evaluation of a rate structure needed to perform necessary sewer improvements.
