

## Gelatin Plastic

### Items Needed:

12 packets of gelatin  
1 ¼ cups of warm water  
Small saucepan  
Whisk  
Spoon  
Various shaped molds  
Food coloring

### Instructions:

- Pour water and gelatin into a small saucepan and place on stove
- Turn the heat on to medium
- Whisk until there are no more lumps and the mixture has thickened and started to steam
- Remove from heat
- Take a spoon and skim off foam that has floated to the top of the mixture - the more you skim, the clearer your plastic will be
- Pour mixture into molds (container lids, silicon molds, etc.)  
Note: the thinner the layer of gelatin, the more likely it is to curl
- Let set in molds for 2 to 3 days  
Optional: use cookie cutters or scissors to cut out shapes or make holes for stringing
- Take out of the mold to finish the drying process which can take up to a week
