

## Water Candles

### Items Needed:

Candle  
Extra wax - either another candle or store bought wax  
Crayons  
Double boiler  
Large bowl  
Water

### Instructions:

- Pour water into a large bowl
- Melt crayons and wax in the double boiler
- For smaller candles, melt the bottom of the candle and attach to a bowl or lid to prevent wax burns when pouring
- Remove wax from the heat and allow to cool for about 5 minutes or until a wax trail appears when wax hits the side of the double boiler
- Starting above the water, pour melted wax onto candle then quickly dip the candle in the water
- Pour remaining wax on candle below the water until desired texture is achieved  
Note: wax is malleable for a little bit so it is also possible to squish and mold while still warm
- If using a base, wait until wax is firm then gently pry the candle off the base
