

# Walking Water

What you need:

Red, blue & yellow food coloring

7 jars, glasses, or clear cups

Paper towels

Water

How you do it:

1. Line up the seven jars.
2. Fill the 1st, 3rd, 5th & 7th jars with water.
3. Put red food coloring into the 1st, yellow into the 3rd, blue into the 5th, and red into the 7th jar and mix.
4. If you have full-sized paper towels, cut them in half so you have 6 halves. If you have “pick-a-size” pull off 6 paper towels.
5. Fold the paper towel in half the long way, and then in half again the long way, so you have a long, skinny folded paper towel. Fold the whole thing in half.
6. Cut your folded paper towel at the bottom so it’s a little taller than your jars. Repeat with all the paper towels.
7. Place a paper towel in the 1st red jar and the 2nd empty jar.
8. Place a paper towel in the 2nd empty jar and the 3rd yellow jar.
9. Place a paper towel in the 3rd yellow jar and the 4th empty jar.
10. Place a paper towel in the 4th empty jar and the 5th blue jar.
11. Place a paper towel in the 5th blue jar and the 6th empty jar.
12. Place the last paper towel in the 6th empty jar and the 7th red jar.
13. In less than an hour, the water will “walk” from the full jars into the empty jars, and you will have all the secondary colors (orange, green & purple) in addition to all the primary colors!
