

## MEMORANDUM

**DATE:** July 18, 2025

**TO:** Aisha Bouziane (Mackenzie)

**FROM:** Christine Johnson, ASCA Registered Consulting Arborist® #823

**RE:** Tree Removal and Protection Plan for Lam Research

---

### Summary

This report includes tree removal and protection recommendations for new buildings, expanded drive aisles, new and expanded parking, and associated improvements at the Lam Research campus at 11361 SW Leveton Drive in Tualatin. Seven hundred and ninety-two (792) trees have been inventoried over the past several years in preparation for campus expansion projects. For this phase of expansion. One hundred and eighty-four (184) trees *over* 8-inch diameter (DSH) are proposed for removal and 197 trees *less than* 8-inch DSH are proposed for removal. Three hundred and seventy-three (373) trees will be retained and protected. Tree protection fencing and limits of construction fencing is recommended to protect existing parking lot and landscape trees from construction impacts.

### Background

The property is zone manufacturing park (MP). The campus is expanding to the north, west, and interior. Proposed development includes new buildings, drive aisle widening, and new parking lots, and the expansion of an existing parking lot. The proposed site plan is provided in Attachment 1.

The project is within an insect pest quarantine area for Emerald Ash Borer (EAB).<sup>1</sup> Ash wood should be disposed of using approved tree care services and wood disposal sites. Oregon Department of Agriculture approved tree removal services are provided in this report.

### Assignment

The purpose of this report is to:

1. Provide tree removal findings and recommendations based on the proposed site and grading plan; and

---

<sup>1</sup> "Quarantines and Control Areas," Oregon Department of Agriculture, accessed July 18, 2025, <https://www.oregon.gov/oda/ippm/Pages/quarantines.aspx?wp4787=se:%22ash%22>

2. Provide recommendations for adequately protecting the trees to be retained during construction.

## Tree Inventory

The inventory was completed over several dates within the past two to three years. A total of 792 trees on or adjacent to the areas of proposed development were inventoried and considered when designing the expansion. The following information was collected for each tree: tree number, common name, scientific name, DSH (diameter at standard height, 4.5 feet above ground level), single-stem DSH, approximate crown radius, health condition, structural condition, pertinent comments, exemption status, inventory date, and treatment (Attachment 2). The tree numbers on the site plan in Attachment 1 correspond to the tree numbers in the inventory in Attachment 2.<sup>2</sup>

## Tree Preservation

Trees 8-inches in diameter and greater are subject to tree preservation and removal requirements outlined in Tualatin Development Code 33.110. A Tree Preservation Plan and Tree Assessment Report prepared by a certified arborist is required with the land use application. Table 1 provides a summary of the number of trees proposed for removal and retention.

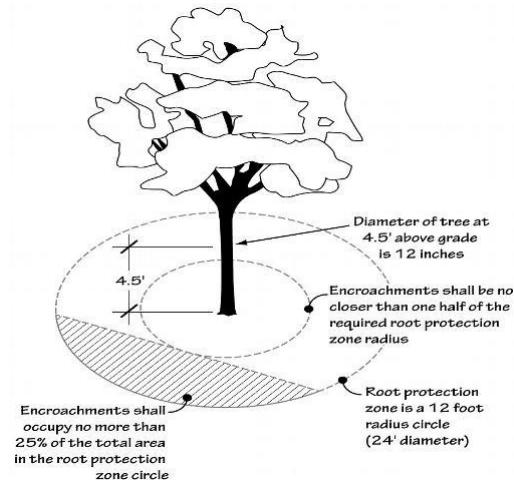

**Table 1** Summary of tree removal and tree retention.

	Non-exempt	Exempt	Total
Remove	184	197	381
Retain	239	134	373
n/a	-	-	38
Total	423	331	792

\*Trees listed as “n/a” were inventoried trees that were either old stumps or trees previously removed from past projects.

A typical minimum root protection zone allows encroachments no closer than a radius from a tree of 0.5 feet per inch of DSH if no more than 25 percent of the root protection zone area (estimated at one foot radius per inch of DSH) is impacted. Figure 1 illustrates this concept. This standard may need to be adjusted on a case-by-case basis due to tree health, species, root distribution, whether the tree will be impacted on multiple sides, the specific development proposed, and other factors.

Attachment 1 illustrates the proposed construction impacts in relation to the existing trees. Based on the construction impacts, 184 trees over 8-inch DSH are proposed for removal because they are either within the construction footprint or their root zones would be severely impacted by construction. Additional tree removal findings are provided in the next section of this report.

**Figure 1: Typical minimum protection zone**

<sup>2</sup> There are trees outside the limits of construction shown on the site plan that are included in the inventory.

### ***Tree protection recommendations***

Protection recommendations for the 373 trees to be retained at the edges of the construction and beyond the construction site are listed below:

#### **1. Tree protection fencing.**

- a. *Height*: Provide a minimum 6-foot-high metal fence (chain-link, chain-link panels, or heavy gage wire).
- b. *Posts & Spacing*: Place fence posts no more than 10 feet apart.
- c. *Existing Grade*: Install fencing flush with the initial undisturbed grade of the protection zone.
- d. *Locations*: Install fencing in the locations shown in Attachment 1.
- e. Limits of construction fencing may act as tree protection fencing if it meets the above criteria.

#### **2. Tree protection signage.**

- a. Weatherproof tree protection signage shall be placed on tree protection fencing.
- b. Signage should be placed at intervals of every third fence panel/section.
- c. See Attachment 3 for an example tree protection sign.

#### **3. Prevent tree protection zone impacts.** The following activities are prohibited within a tree protection zone:

- a. Dumping of harmful chemicals and materials, such as paints, thinners, cleaning solutions, petroleum products, concrete or dry wall excess, construction debris, or run-off;
- b. Storage of materials such as building supplies, soil, rocks, or waste items;
- c. Placement of portable toilets, drop-boxes, or similar temporary items;
- d. Parking of vehicles or equipment; and,
- e. Excavation, trenching, grading, root pruning, or similar activities unless directed by an arborist present on site.

#### **4. Tree protection fencing maintenance and removal.**

- a. *Maintenance*: Maintain protection fencing in good effective condition at the approved and inspected location. Fencing that is damaged during site work shall be repaired and placed in the approved location prior to resuming work in the area. Failure to maintain tree protection fencing in the approved locations may result in a code violation.
- b. *Removal*: Fencing may be removed when all construction activity that could cause damage or harm to trees and other vegetation has been completed and is no longer occurring on site (i.e., no use of heavy equipment; no delivery trucks and contractor vehicles driving or parking off driveway; no utility trenching; etc.)

#### **5. Pruning.** Some of the trees may need to be clearance and/or reduction pruned to allow for construction access. Pruning should be performed by a qualified arborist.<sup>3</sup> The following limitations apply to these pruning specifications:

- a. Climbing spurs shall not be used.

---

<sup>3</sup> The ANSI Z133 (American National Standard for Arboricultural Operations – Safety Requirements) defines a *qualified arborist* as, “an individual who, by possession of a recognized degree, certification, or professional standing, or through related training and on-the-job experience, is familiar with the equipment and hazards involved in arboricultural operations and who has demonstrated ability in the performance of the special techniques involved.”

- b. All pruning cuts shall be made in a manner that is consistent with the ANSI A300 Part 1 pruning cuts section 7.
  - c. Cuts should be 2 to 4-inches in diameter, not to exceed 4-inches.
  - d. Any reduction and/or clearance pruning shall occur prior to construction in accordance with ANSI A300 pruning standards the minimum necessary to allow for construction.
  - e. Reduction cuts shall be made to lateral branches that are at least one-third to one-half the sizes of the parent branches.
  - f. All cuts shall be made just outside the branch collars.
  - g. No more than one-fourth of the live crown of the tree shall be pruned in an annual growing season. If more than one-fourth of the live crown of the tree needs to be pruned to accomplish the pruning objectives, the additional pruning shall be delayed until the following annual growing season.
  - h. Work practices shall be consistent with the current ANSI A300 Part 1 pruning practices section 8 and the ANSI Z133 standard.
- 6. Project arborist oversight.** The project arborist shall oversee the demolition and grading for the new stairs and sidewalk near trees 22830, 22833, and 22837.
- 7. Erosion control.** Any required sediment fencing shall be routed outside the tree protection zones to protect the root systems of the trees to be retained. If erosion control is required within the tree protection zones, straw wattles shall be used if approved by the City of Tualatin.

Existing parking lots that will be in use for non-construction parking do not have tree protection fencing at this time. Additional tree protection recommendations that are consistent with City of Tualatin standards are provided in Attachment 6.

## Tree Removal

This section of the report provides findings for the Tree Assessment Report criteria in Section 33.110(4)(b) of the Tualatin Development Code. The code criteria are listed followed by my findings in *italics*.

(b) Tree Assessment Report. A tree assessment prepared by a certified arborist must include:

*This report has been prepared by Christine Johnson, an ISA Board Certified Master Arborist. This criterion is met.*

(i) An analysis as to whether trees proposed for preservation may be preserved in light of the development proposed, are healthy specimens, and do not pose an imminent hazard to persons or property if preserved;

*The health and structural conditions of the trees to be preserved in the vicinity of the proposed development have been evaluated by our firm. A summary of the tree conditions is provided in the tree inventory in Attachment 2. The preserved trees are healthy specimens and are not imminent hazards to persons or property as of our assessment dates. There are several small diameter trees (less than 8-inch DBH) that have died and may be suitable for replacement. The preserved trees will need to be protected during construction as detailed in the Tree Protection*

*Recommendations Section of this report (above), so they remain healthy and viable for the foreseeable future. This criterion is met.*

- (ii) An analysis as to whether any trees proposed for removal could reasonably be preserved in light of the development proposed and health of the tree;

*Our firm coordinated with the project design team at Mackenzie to consider design options for preserving healthy trees. Based on the project design along with site constraints, stormwater requirements, utility and site access connections, parking requirements, and client needs, tree preservation has been maximized to the extent practicable. This criterion is met.*

- (iii) a statement addressing the approval criteria set forth in TDC 33.110(5);

*The reason for the proposed tree removals is to construct proposed improvements based on Architectural Review approval (TDC Subsection 33.110(5)(iii)). This criterion is met.*

- (iv) the name, contact information, and signature of the arborist preparing the report; and

*The name, contact information, and signatures of the arborist that prepared this report is provided. This criterion is met.*

- (v) The tree assessment report must have been prepared and dated no more than one calendar year preceding the date the development or Tree Removal Permit application is deemed complete by the City.

*This report has been prepared and provided less than one calendar year preceding the date the development application has been deemed complete. There are several trees that were inventoried in 2022; however, their size, health, and condition is not expected to have changed significantly in the past two years and the project arborist has updated information on the trees if they were considered for preservation. This criterion is met.*

### **Ash disposal**

Ash trees (*Fraxinus spp.*) should be removed by an Oregon Department of Agriculture approved tree removal service (Attachment 5) and disposed of at a wood processing site that is equipped to properly dispose of infected wood, such as Allwood Recyclers (Fairview), McFarlane's Bark Inc. (Milwaukie), and Wood Waste Management (Portland).

## **Conclusion**

Four hundred and twenty-three (423) trees over 8-inches in diameter are subject to tree preservation standards for the Lam Research expansion project. One-hundred and eighty-four (184) trees over 8-inches in diameter are proposed for removal to facilitate several new buildings, new parking lots, an expanded parking lot, and expanded drive aisles. The remaining trees will be protected with tree protection fencing and project arborist oversight.

Please let me know if you have any questions about the information provided in this report.

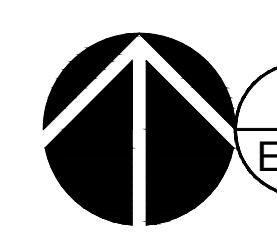

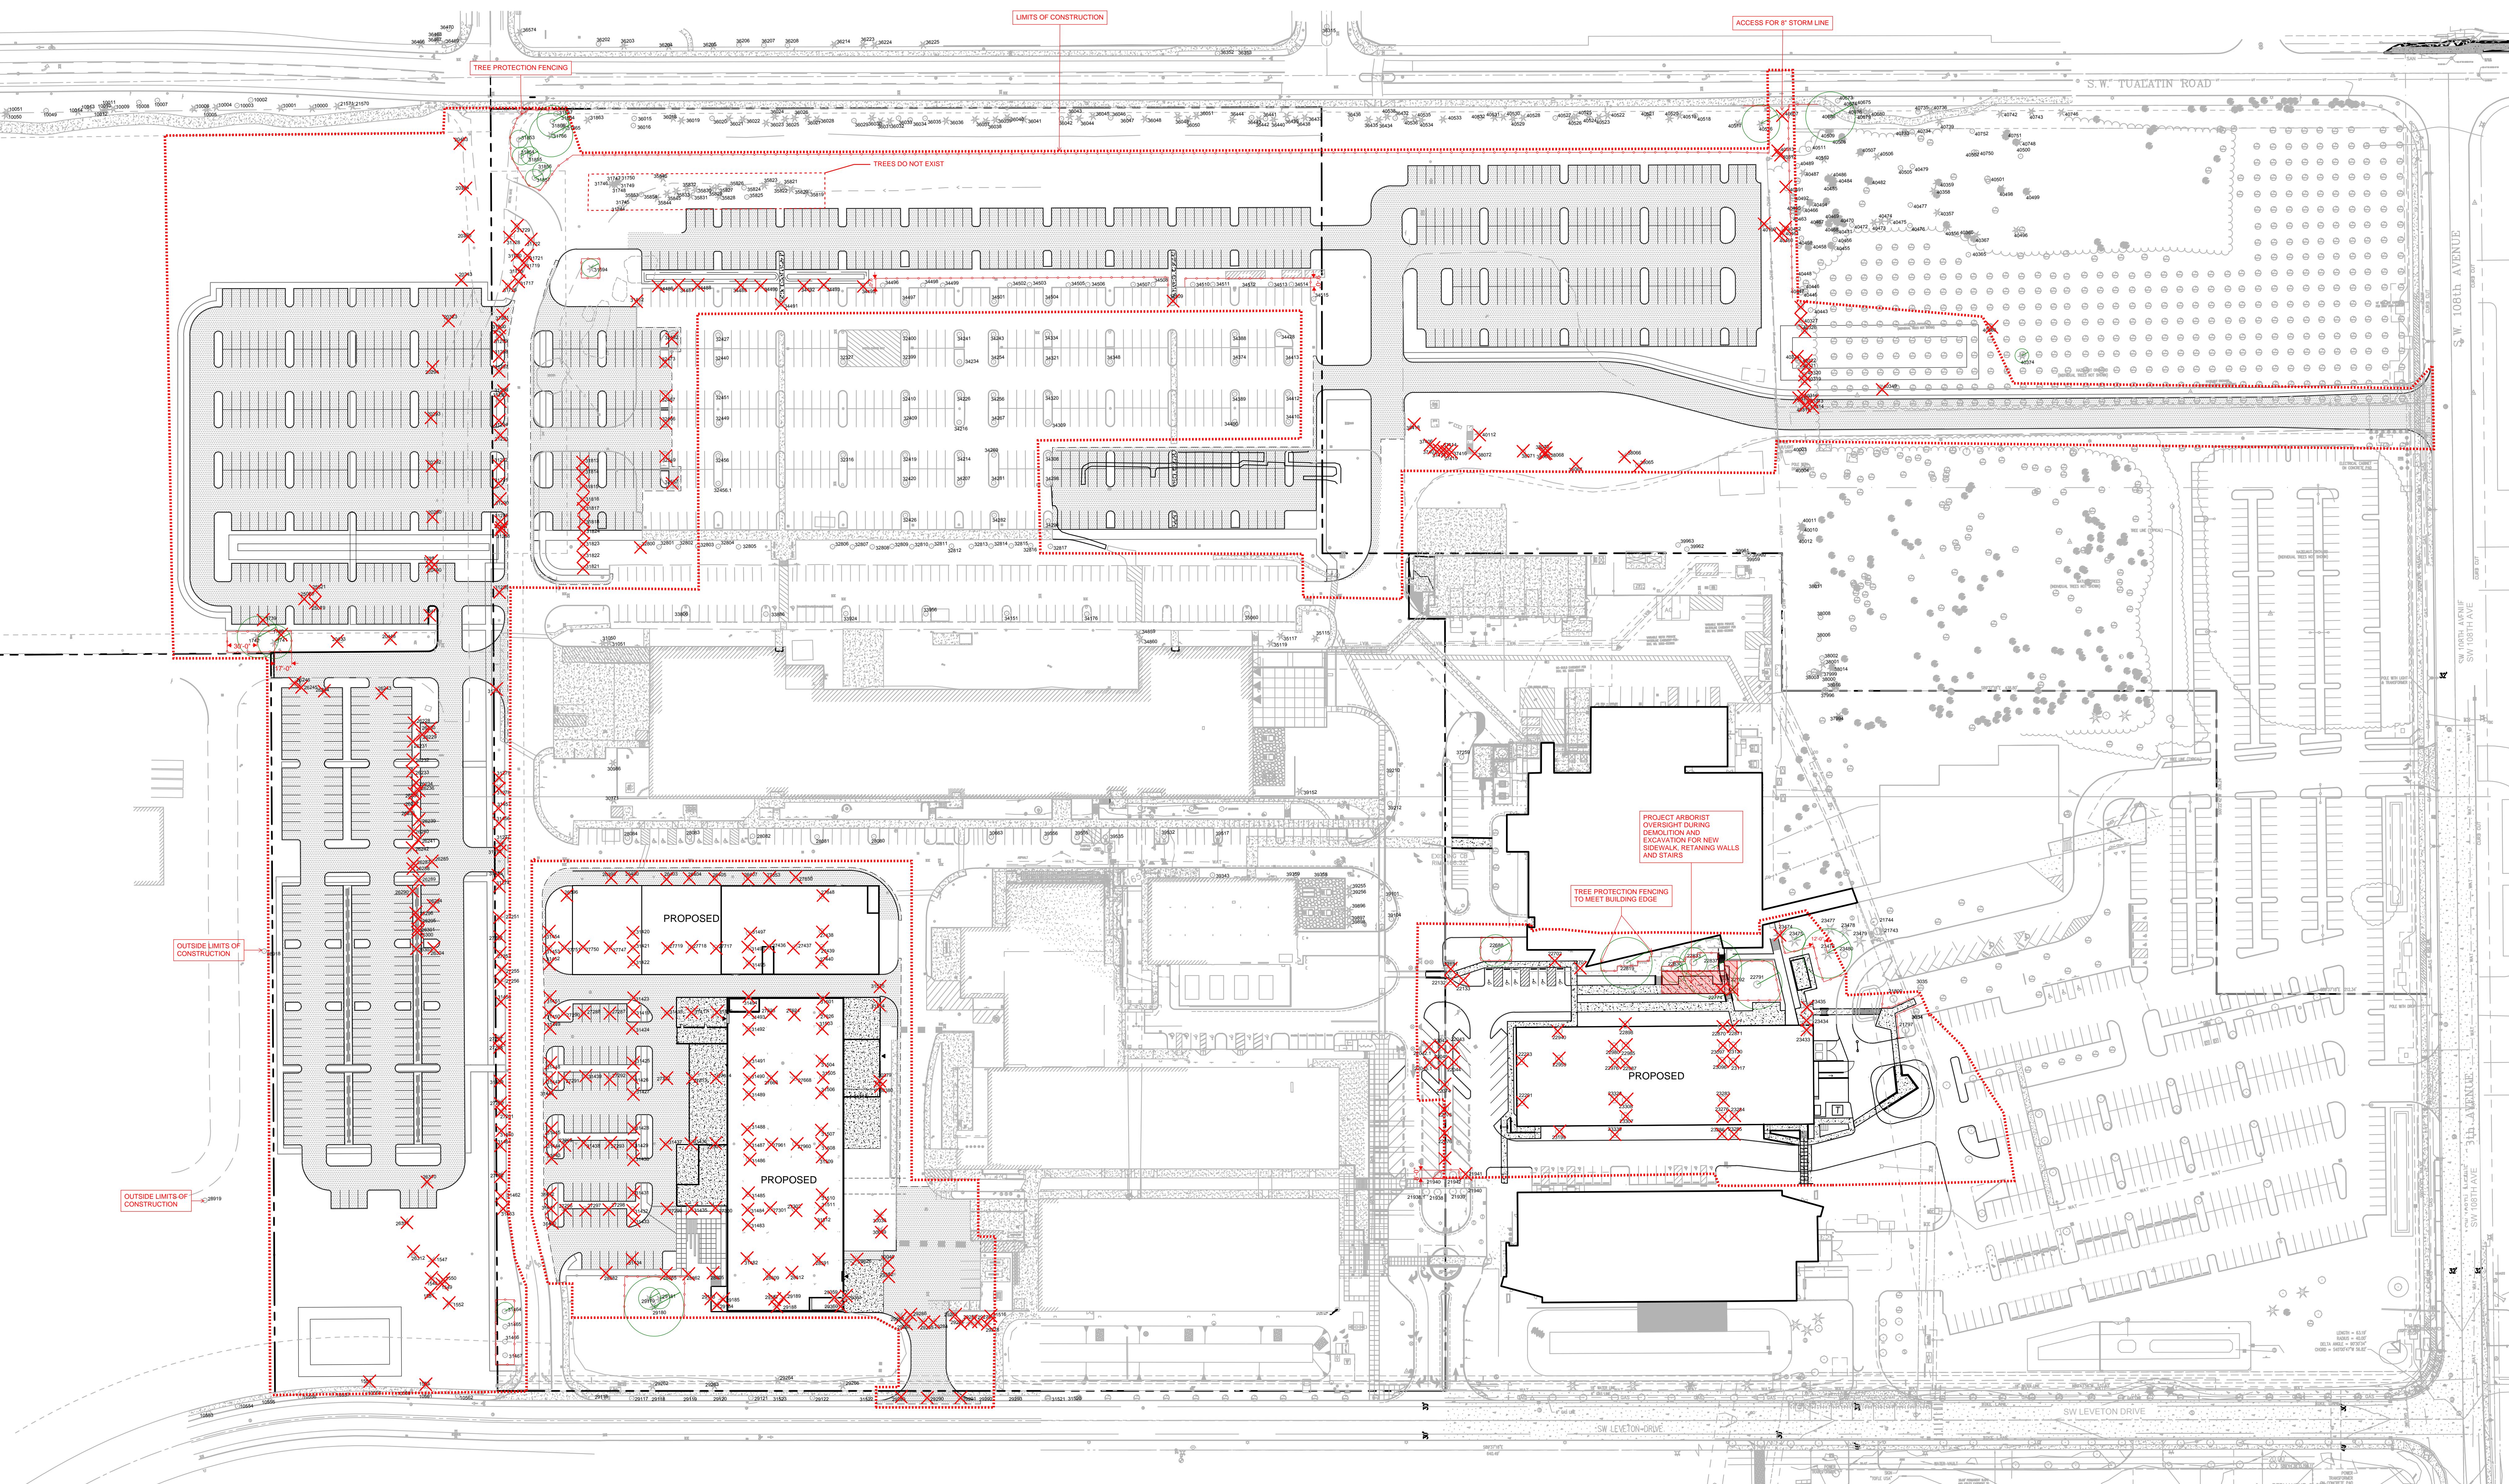

Sincerely,

*Christine Johnson*

# EMERALD ASH BORER QUARANTINE ALERT

OREGON  
DEPARTMENT OF  
AGRICULTURE

## WASHINGTON, YAMHILL, MARION, CLACKAMAS COUNTIES, OREGON

A permanent quarantine is now in effect. Emerald ash borer (EAB) has been confirmed in three new counties, triggering an expansion of the quarantine. Tree materials of ash, olive, and white fringe tree, must remain within quarantined counties (Washington, Yamhill, Marion, Clackamas). Wood waste must be processed accordingly and disposed of.

Actual Size

## Regulated Ash, Olive, & White Fringe Tree Materials

- Nursery stock
- Scion wood
- Bud wood
- Logs
- Roots and branches
- Stumps
- Green lumber
- Chips and mulch
- Firewood of hardwood species

## Quarantine Exceptions

- Nurseries or groups that have a formal compliance agreement with ODA
- Seeds and leaves
- Processed lumber kiln dried, free of bark and material 1 inch below bark.
- Finished wood products without bark, including furniture, baskets, and baseball bats

## April 1 - September 30

Avoid felling ash, olive and white fringe trees, including branches, and stumps. Hazardous trees can be mitigated at any time. Chip or process as soon as possible on site. Avoid moving any woody material.

## October 1 - March 31

Conduct tree removal and pruning during this time period. Transport trees and parts of trees to a facility within the quarantine zone where it will be processed before April 1st.

For more information please visit [www.OregonEAB.com](http://OregonEAB.com),  
To subscribe to the EAB email list visit [ODA.FYI/subscribe](http://ODA.FYI/subscribe)

For questions please email us at [EAB@oda.oregon.gov](mailto:EAB@oda.oregon.gov) or call 503-986-4636

# EMERALD ASH BORER (EAB) PERMANENT QUARANTINE

OREGON  
DEPARTMENT OF  
AGRICULTURE

## EAB Quarantine Frequently Asked Questions.

- **Can regulated material be moved within the quarantine?**  
Movement of EAB hosts within the quarantine area (Washington, Yamhill, Marion and Clackamas counties) is permitted. Ash, olive, and white fringe trees can be sold, given away, or planted, as long as they remain within the quarantine boundaries.
- **Why are we concerned?**  
EAB kills ash and white fringe trees and can damage olive trees. To slow the spread of EAB, ODA is placing a quarantine on infested Counties to restrict the movement of tree materials that may spread EAB to new areas in the state.
- **What is a quarantine? What are the consequences for not adhering to the quarantine?**  
Quarantine is the legal enforcement of actions that help slow the spread of pests to new areas or that prevent them from multiplying where they have already gained entry. For this reason, ODA is implementing a permanent EAB quarantine as per Oregon Administrative Rule (OAR 603-052-1075). Non-compliance will result in the spread of EAB and civil penalties of up to \$10,000 as provided by ORS 570.995
- **What do I need to do?**  
Nurseries train staff to identify signs of EAB and report sightings to ODA. Communicate clearly to the purchaser that host plants are required to remain within the quarantine boundaries. Inspect EAB host plants prior to moving them within the quarantine zones, and inspect mother trees.

If you see symptoms or signs of EAB infestation please call 1-866-INVADER or contact ODA at: [EAB@oda.oregon.gov](mailto:EAB@oda.oregon.gov)

## Ash Tree ID

- Compound leaves with 5-11 leaflets
- Unstaggered opposite branching
- Diamond shape bark pattern
- Seeds are oar-shaped samaras

Oregon Ash leaf  
Photo: Jordon Bartosz

## Signs & Symptoms of EAB

- Crown dieback in heavily infested trees
- D-shaped emergence holes in bark about 0.118 inch (3mm) in size.
- Sucker shoots emerging from trunk
- S-shaped galleries underneath the bark
- Bark splitting found on trunk or branches
- Woodpecker activity
- The tree is dying from top down

D-shaped emergence hole

Bark splitting

S-shaped galleries

## Attachment 5 - ODA Approved Ash Tree Removal Service

The following is a list put together by the Oregon Department of Agriculture (ODA). The list is intended to help guide residents and businesses to resources that can handle ash, olive, and white fringe tree materials in accordance with the temporary quarantine adopted in Washington County. **ODA will continue to add and update this list as more businesses are identified.**

*-It is important to confirm that any business contacted, on or off this list, knows about the temporary quarantine, and can properly handle the wood materials.*

## Attachment 6 - Tree Protection Recommendations

The following recommendations will help to ensure that the trees to be retained are adequately protected:

### **Before Construction Begins**

- 1. Notify all contractors of the tree protection procedures.** For successful tree protection on a construction site, all contractors must know and understand the goals of tree protection.
  - a. Hold a tree protection meeting with all contractors to explain the goals of tree protection.
  - b. Have all contractors sign memoranda of understanding regarding the goals of tree protection. The memoranda should include a penalty for violating the tree protection plan. The penalty should equal the appraised value of the tree(s) within the violated tree protection zone per the current Trunk Formula Method as outlined in the current edition of the *Guide for Plant Appraisal* plus any resulting fines by government agencies.
  - c. The penalty should be paid to the owner of the property.
- 2. Fencing.**
  - a. Establish fencing around each tree or group of trees to be retained.
  - b. The fencing should be put in place before the ground is cleared to protect the trees and the soil around the trees from disturbances.
  - c. Fencing should be established by the project arborist based on the needs of the trees to be protected and to facilitate construction.
  - d. Fencing should consist of 6-foot-high steel fencing on concrete blocks or 6-foot-high steel fencing secured to the ground with 8-foot metal posts to prevent it from being moved by contractors, sagging or falling down.
  - e. Fencing should remain in the position that is established by the project arborist and not be moved without approval from the project arborist until final project approval.
- 3. Signage.**
  - a. All tree protection fencing should be provided with signage so that all contractors understand the purpose of the fencing.
  - b. Signage should be placed on every other fence panel.
  - c. Signage should be weathered and secured to fencing.
  - d. Signage has been included in Attachment 3.

## **During Construction**

- 1. Protection Guidelines Within the Tree Protection Zones.**
  - a. No traffic should be allowed within the tree protection zones. This includes but is not limited to vehicle, heavy equipment, or even repeated foot traffic.
  - b. No storage of materials including but not limiting to soil, construction material, or waste from the site should be permitted within the tree protection zones. Waste includes but is not limited to concrete wash out, gasoline, diesel, paint, cleaner, thinners, etc.
  - c. Construction trailers should not be parked/placed within the tree protection zones.
  - d. No vehicles should be allowed to park within the tree protection zones.
  - e. No activity should be allowed that will cause soil compaction within the tree protection zones.
2. The trees should be protected from any cutting, skinning or breaking of branches, trunks, or woody roots.
3. The project arborist should be notified prior to the cutting of woody roots from trees that are to be retained to evaluate and oversee the proper cutting of roots with sharp cutting tools. Cut roots should be immediately covered with soil or mulch to prevent them from drying out.
4. No grade changes should be allowed within the tree protection zones.
5. Trees that have woody roots cut should be provided supplemental water during the summer months.
6. Any necessary passage of utilities through the tree protection zones should be by means of tunneling under woody roots by hand digging or boring with oversight by the project arborist.
7. Any deviation from the recommendations in this section should receive prior approval from the project arborist.

## **After Construction**

- 1. Carefully landscape the areas within the tree protection zones.** Do not allow trenching for irrigation or other utilities within the tree protection zones.
- 2. Carefully plant new plants within the tree protection zones.** Avoid cutting the woody roots of trees that are retained.
- 3. Irrigation.** Do not install permanent irrigation within the tree protection zones unless it is drip irrigation to support a specific planting, or the irrigation is approved by the project arborist.
- 4. Drainage.** Provide adequate drainage within the tree protection zones and do not alter soil hydrology significantly from existing conditions for the trees to be retained.
- 5. Inspect landscape for pests and disease.** Provide for the ongoing inspection and treatment of insect and disease populations that can damage the retained trees and plants.
- 6. Fertilization.** The retained trees may need to be fertilized if recommended by the project arborist.
7. Any deviation from the recommendations in this section should receive prior approval from the project arborist.

## Attachment 7 – Assumptions and Limiting Conditions

1. Any legal description provided to the consultant is assumed to be correct. The site plans and construction information provided by Mackenzie was the basis of the information provided in this report.
2. It is assumed that this property is not in violation of any codes, statutes, ordinances, or other governmental regulations.
3. The client is advised to ensure compliance with applicable local, state, and federal laws and regulations that could relate to this project, i.e., Local and State Tree or Natural Resource Regulations, Local and State Development Regulations, Migratory Bird Treaty Act, Endangered Species Act, Clean Water Act, Americans with Disabilities Act, etc. The consultant may advise the client of issues regarding local, state, and federal laws that the consultant believes would be helpful to the client, but any such advice or comment is not a determination or interpretation of local, state, or federal law or regulation.
4. The consultant is not responsible for information gathered from others involved in various activities pertaining to this project. Care has been taken to obtain information from reliable sources.
5. Loss or alteration of any part of this delivered report invalidates the entire report.
6. Drawings and information contained in this report may not be to scale and are intended to be used as display points of reference only.
7. The consultant's role is only to make recommendations. Inaction on the part of those receiving the report is not the responsibility of the consultant.
8. The purpose of this report is to:
  - a. Provide tree removal findings and recommendations based on the proposed site and grading plan; and
  - b. Provide recommendations for adequately protecting the trees to be retained during construction.
